EXPERIENCE

Technical Leader, ML Engineering, Eli Lilly & Company 2025-Present

- Owned the agentic AI capital auditing platform for manufacturing finance end to end (roadmap, AI and security approvals, executive steering, business integration), becoming the first digital-native AI tool in the function.
- Replaced a 12-month vendor build by re-architecting cloud microservices; led 12 engineers to production in 3 months, scaling from 3 to 45+ users and identifying $3M+ in overpayments.
- Set the technical direction for an Edge AI manufacturing platform, defining the multi-site, GPU-accelerated OpenShift architecture to run resilient AI/ML workloads and agents for GMP reasoning.
- Built and led a 7-person AI engineering practice across 3+ business units and helped establish Lilly's first ML Engineer technical track and role; coached engineers to 2 promotions.

Director, AI & Data Engineering, Alvarez & Marsal 2023-2025

- Realized $5M in value by directing a 15-person team across data warehouse modernization, governance, and a unified patient data platform for a home-based healthcare client's turnaround.
- Stepped in as interim CIO for 3 months alongside the MD, setting the program roadmap and briefing the C-suite weekly on priorities, risks, and decisions.
- Tripled contract revenue by leading AI engineers to build custom OCR models for FEMA reimbursement (90% time reduction, $60M payout); aligned IT, security and federal stakeholders to clear approvals and dependencies.
- Architected data for audit simulation software testing provider directories against CMS requirements, improving federal audit performance by an average of 15% for 2 health insurance payors.
- Provided situational coaching and mentorship to managers and junior leaders, resulting in 3 promotions.

Manager, Data Science, Capgemini 2021-2023

- Drove a CPG client's first generative AI project as ChatGPT emerged, building GPT-based features that write on-brand, SEO-optimized e-commerce product descriptions.
- Managed 15 data and full-stack engineers to migrate the copywriting application from AWS to Azure and modernize 20 TB across 30+ country databases.
- Supported a $45M contract win by leading a hierarchical CNN (Keras, TensorFlow) that detected and root-caused EV battery defects at 92% F1 in a GMP-compliant environment.

Senior Data Scientist, Purdue University 2020-2021

- Managed team of 12 consultants to fine-tune and deploy a Named Entity Recognition model (28% lift in F1) for engine end of life prediction for U.S. engine manufacturer.
- Served as Solutions Architect to identify Data Science needs for 8+ prospective clients and orchestrate product delivery/integration—leading to over $500,000 in corporate contract funding.

AI/ML Scientist & Product Owner, Ford Motor Company 2019-2020

- Product Owner for connected vehicle data governance tool; managed product team of 7 Software Engineers and Product Designers to productionize and evangelize tool, onboarding 50+ engineers.
- Built Spark pipeline turning 10M+ trip events and 3TB+ of fleet data into route predictions (∼90% accurate) and ADAS availability maps, plus a "virtual drive" tool that resolved 10+ disengagement edge cases.

EDUCATION

Michigan State University, East Lansing, MI
Master of Science in Business Analytics
Bachelor of Arts in English, Graduated with Honors

SKILLS

- **AI / Agentic Systems:** LangChain, MCP, vLLM, LLM and agent orchestration, ML deployment
- **Platform / Cloud:** OpenShift, Kubernetes, Docker, Helm, Terraform, Azure, AWS, GCP
- **Data Engineering:** Python, SQL, PostgreSQL, Spark, Scala
- **Languages (other):** R, Java, JavaScript/React
