EXPERIENCE

Technical Leader, ML Engineering, Eli Lilly & Company 2025-Present

- Led 12 engineers to rebuild an agentic AI capital auditing platform in 3 months (vs. 12-month prior vendor build), delivering MVP to production with full Azure-to-AWS migration and microservice-driven re-architecture
- Pioneered the first digital-native AI tool in manufacturing finance, delivered 3–4× faster document processing and 6× fewer LLM calls; scaled from 3 to 100+ users and identified $3M+ in construction overpayments
- Architect for an Edge AI manufacturing platform: designed multi-site, GPU-accelerated OpenShift architecture, to orchestrate resilient, highly-available AI/ML workloads and agents at the edge for GMP reasoning
- Built and led a 7-person AI engineering practice across 3+ business units and helped establish Lilly's first ML Engineer technical track and role; provided technical and situational coaching to engineers

Director, AI & Data Engineering, Alvarez & Marsal 2023-2025

- Tripled contract revenue by leading an AI Engineering team to build proprietary OCR models for an energy distributor—streamlining FEMA reimbursements with a 90% time reduction and $60M in projected payouts
- Data Architect of proprietary healthcare directory audit simulation software for US federal compliance, enabling 2 payors to improve federal audit performance by an average of 15%
- IT Transformation Lead for a home-based healthcare client, leading a 15-person team to modernize Data Warehouse, implement governance, and deploy Patient 360, realizing $5M in value
- Provided situational coaching and mentorship to managers and junior leaders

Manager, Data Science, Capgemini 2021-2023

- Managed team of 15 Data Engineers and Full Stack Engineers to migrate legacy .NET ASP application from AWS to Azure for CPG client's GPT-based product copywriting platform
- Data Architect for CPG generative AI copywriting tool database modernization, leading a team of 3 Data Engineers to migrate 20 TB of data from 30+ country databases from SQL Server on EC2 to Azure SQL
- Led development of a hierarchical CNN (Keras, TensorFlow) that detected and root-caused EV battery defects at 92% F1, supporting a $45M contract win.

Senior Data Scientist, Purdue University 2020-2021

- Managed team of 12 consultants to fine-tune Named Entity Recognition model (28% lift in F1) and deploy (REST) via Databricks MLflow for engine end of life prediction for U.S. engine manufacturer
- Served as Solutions Architect to identify Data Science needs for 8+ prospective clients and orchestrate product delivery/integration—leading to over $500,000 in corporate contract funding

AI/ML Scientist & Product Owner, Ford Motor Company 2019-2020

- Product Owner for connected vehicle data governance tool; managed product team of 7 Software Engineers and Product Designers to productionize and evangelize tool, onboarding 50+ engineers
- Created route prediction algorithm using PySpark to interpolate trips from 10M+ customer key-on/-off events, generating a multi-million-dollar investment to productionize; ∼90% accurate
- Replicated and enhanced Text-to-SQL model, resulting in Ford invention disclosure, and deployed REST API to Kubernetes (K8s); ∼91% accurate; selected as keynote for Ford Global Data Conference

EDUCATION

Michigan State University, East Lansing, MI
Master of Science in Business Analytics
Bachelor of Arts in English, Graduated with Honors

SKILLS

- **Programming:** Python, R, SQL, PostgreSQL, Scala, Java, JavaScript, React, Terraform, Helm, C#
- **Tools:** Spark, Docker, Kubernetes, OpenShift, Azure, AWS, GCP, ArcGIS, LangChain, MCP, vLLM
- **Certifications:** Azure AI Fundamentals (2025)
